1997 ANNUAL INDEXES

Textile Research Journal

Volume 67

AUTHOR AND TITLE INDEX
pp. 935–942

MONTH	PAGES
January	1–76
February	77–154
March	155–232
April	233–310
May	311–388
June	389–466

SUBJECT INDEX, pp. 942–950

MONTH	PAGES
July	467–544
August	545–622
September	623–700
October	701–778
November	779–856
December	857–954

AUTHOR AND TITLE INDEX

Abbas, M. S. Effects of Yarn and Fabric Construction on Spirality of Cotton Single Jersey Fabrics (*Tao, Dhingra, Chan*) 57

Adanur, Sabit Predicting the Mechanical Properties of Nonwoven Geotextiles with the Finite Element Method (*Liao, Dréan*) 753

Akin, Danny E. Effect of Retting Enzymes on the Structure and Composition of Flax Cell Walls (*Morrison, Gamble, Rigsby, Henriksson, Eriksson*) 279

Influence of Chelating Agents and Mechanical Pretreatment on Enzymatic Retting of Flax (*Henriksson, Rigsby, Patel, Eriksson*) 829

Andrews, B. A. Kottes Effect of Catalysts on the Thermal Characteristics of Cotton Citric Acid DP Finishes (*Trask-Morrell*) 846

Arora, Manpreet S. A Dimensionless Model for the Equilibrium Sorption of Mixtures of Acid Dyes by Polyamides from Finite Dyebaths (*McGregor*) 389

Controlling Nylon Dyeing by Dye and Chemical Metering (*McGregor, Jasper*) 609

Bach, E. New Mathematical Model for Determining Time-Dependent Adsorption and Diffusion of Dyes into Fibers Through Dye Sorption Curves in Combination Shades Part I: Mathematical Fundamentals (*Cleve, Denter, Duffner, Schollmeyer*) 701

Backer, Stanley A Micromechanical Model of the Tensile Behavior of Woven Fabric (*Realff, Boyce*) 445

Micromechanics of a Planar Hybrid Fibrous Network (*Pan, Chen, Seo*) 907

Wear and Fatigue of Nylon and Polyester Mooring Lines (*Seo, Wu, Chen, Toomey*) 467

Baik, Doo Hyun Heat and Mass Transfer Analysis of Fabric in the Tenter Frame (*Park*) 311

Baird, M. The Relationship Between Hygral Expansion and Measured Set of Piece-Dyed Worsted Fabrics (*Dodd, Carr*) 902

Bechtold, T. Dyeing Behavior of Indigo Reduced by Indirect Electrolysis (*Burtscher, Turcanu, Bobleter*) 635

Beck, K. Correlating Optical and Kinetic Deviations from Ideality in Fiber Reactive Dye Mixtures (*Snyder, Berkstresser, Smith, McGregor, Jasper*) 571

Bel-Berger, Patricia Effects of Mechanical Cleaning on Cotton Fibers Part III: Effects of Card Wire Condition on White Specks (*Von Hoven*) 857

Berkstresser, G. Correlating Optical and Kinetic Deviations from Ideality in Fiber Reactive Dye Mixtures (*Snyder, Smith, McGregor, Jasper*) 571

Bhortakke, M. K. High Speed Yarn Production with Air-Jet Spinning: Effects of Some Fiber Parameters (*Nishimura, Matsuo, Inoue, Morihashi*) 101

Blanchard, Lawrence J. Cotton Cleanability Part I: Modeling Fiber Breakage (*Robert*) 417

Bobleter, O. Dyeing Behavior of Indigo Reduced by Indirect Electrolysis (*Bechtold, Burtscher, Turcanu*) 635

Boullart, L. Optimizing the Fiber-to-Yarn Production Process with a Combined Neural Network/Genetic Algorithm Approach (*Sette, Van Langenhove, Kiekens*) 84

Boyce, M. C. A Micromechanical Model of the Tensile Behavior of Woven Fabric (*Realff, Backer*) 445

Brandt, Brenda Effect of Natural and Synthetic Fibers and Film and Moisture Content on Stratum Corneum Hydration in an Occlusive System (*Cameron, Brown, Dallas*) 585

Brown, Donna M. Effect of Natural and Synthetic Fibers and Film and Moisture Content on Stratum Corneum Hydration in an Occlusive System (*Cameron, Dallas, Brandt*) 585

Bruniaux, Pascal Modeling and Simulation of a Falling Yarn with One End Fixed (*Ghith, Koncar, Vasseur*) 321

Multirate Predictive Control with Nonlinear Optimization Application to a Thermal Process for Batch Dyeing (*Koncar, Koubaa, Legrand, Vasseur*) 788

Bueno, Marie-Ange Instrumental Measurement and Macroscopical Study of Sanding and Raising (*Viallier, Durand, Renner, Lamy*) 779

Burtscher, E. Dyeing Behavior of Indigo Reduced by Indirect Electrolysis (*Bechtold, Turcanu, Bobleter*) 635

Cai, Y. Low Temperature Bleaching of Jute Fabric Using a Peracetic Acid System (*David*) 459

Calamari, T. A. Cotton Fabrics Produced with Twistless Wrap Spun Yarns (*Ruppenicker, Sawhney, Harper*) 198

Cameron, Bruce A. Effect of Natural and Synthetic Fibers and Film and Moisture Content on Stratum Corneum Hydration in an Occlusive System (*Brown, Dallas, Brandt*) 585
Cao, Jinan DSC Studies of the Melting Behavior of α-Form Crystallites in Wool Keratin (*Joko, Cook*) 117
Carr, C. M. The Relationship Between Hygral Expansion and Measured Set of Piece-Dyed Worsted Fabrics (*Dodd, Baird*) 902
Carr, W. W. Infrared Absorption Studies of Fabrics (*Sarma, Johnson, Do, Williamson, Perkins*) 725
Cassidy, T. Woolen Ring-Frame Drafting (*Fang, Lee*) 163
Cegarra, J. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Coderch, Lopez, de la Maza, Manich, Parra*) 131
Cha, Hee Cheol Effect of Pre-Existing Dyes and Fabric Type on Cellulase Treatment of Cotton Fabrics (*Choe, Park, Jeon*) 155
Chambers, Edgar IV Influence of Pattern Design and Fabric Type on the Hand Characteristics of Pigment Prints (*Robinson, Gatewood*) 837
Chan, C. K. Effects of Yarn and Fabric Construction on Spirality of Cotton Single Jersey Fabrics (*Tao, Dhingra, Abbas*) 57
Chen, Cheng-Chi Absorption Kinetics of Direct Dye on Cotton from Finite Baths (*Hsiung*) 77
Chen, Julie Micromechanics of a Planar Hybrid Fibrous Network (*Pan, Seo, Backer*) 907
Wear and Fatigue of Nylon and Polyester Mooring Lines (*Seo, Wu, Toomey, Backer*) 467
Chen, Y. Characterizing Fabric End-Use by Fabric Physical Properties (*Collier*) 247
Cho, Gilsoo Effect of a Dual Function Finish Containing an Antibiotic and a Fluorochemical on the Antimicrobial Properties and Blood Repellency of Surgical Gown Materials (*Cho*) 875
Cho, Jeong-Sook Effect of a Dual Function Finish Containing an Antibiotic and a Fluorochemical on the Antimicrobial Properties and Blood Repellency of Surgical Gown Materials (*Cho*) 875
Chocron-Benloulo, Isaias Sidney A Simple Analytical Model to Simulate Textile Fabric Ballistic Impact Behavior (*Rodríguez, Sánchez-Gálvez*) 520
Choe, Eun Kyung Effect of Pre-existing Dyes and Fabric Type on Cellulase Treatment of Cotton Fabrics (*Park, Cha, Jeon*) 155
Chu, Youe-Tsyr New Interpretation of the Fibrogram (*Riley*) 897
Clapp, T. G. A Preliminary Investigation of a Beta-Particle Transmission Gauge for Seam Quality Determination (*Titus, Zhu, Gardner*) 23
Cleve, E. New Mathematical Model for Determining Time-Dependent Adsorption and Diffusion of Dyes into Fibers Through Dye Sorption Curves in Combination Shades Part I: Mathematical Fundamentals (*Bach, Denter, Duffner, Schollmeyer*) 701
Coderch, L. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Lopez, de la Maza, Manich, Parra, Cegarra*) 131
Multilamellar Liposomes Including Cholesterol as Carriers of a 1:2 Metal Complex Dye in Wool Dyeing (*de la Maza, Manich, Parra, Serra*) 325
Collier, B. J. Characterizing Fabric End-Use by Fabric Physical Properties (*Chen*) 247
Cook, John R. DSC Studies of the Melting Behavior of α-Form Crystallites in Wool Keratin (*Cao, Joko*) 117

Dallas, Merry Jo Effect of Natural and Synthetic Fibers and Film and Moisture Content on Stratum Corneum Hydration in an Occlusive System (*Cameron, Brown, Brandt*) 585
David, S. K. Effect of Glow Discharge-Polymer Treatments on the Shrinkage Behavior and Physical Properties of Wool Fabric (*Zuchairah, Pailthorpe*) 69
Low Temperature Bleaching of Jute Fabric Using a Peracetic Acid System (*Cai*) 459
Davis, H. Measuring Fiber Orientation in Nonwovens Part III: Fourier Transform (*Pourdeyhimi, Dent*) 143
de la Maza, A. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Coderch, Lopez, Manich, Parra, Cegarra*) 131
Multilamellar Liposomes Including Cholesterol as Carriers of a 1:2 Metal Complex Dye in Wool Dyeing (*Coderch, Manich, Parra, Serra*) 325
Dent, R. Measuring Fiber Orientation in Nonwovens Part III: Fourier Transform (*Pourdeyhimi, Davis*) 143
Part IV: Flow Field Analysis (*Pourdeyhimi*) 181
Denter, U. New Mathematical Model for Determining Time-Dependent Adsorption and Diffusion of Dyes into Fibers Through Dye Sorption Curves in Combination Shades Part I: Mathematical Fundamentals (*Cleve, Bach, Duffner, Schollmeyer*) 701
Dhingra, R. C. Effects of Yarn and Fabric Construction on Spirality of Cotton Single Jersey Fabrics (*Tao, Chan, Abbas*) 57
Diz, M. Reaction to a New Thiol Cationic Surfactant with Bunte Salt in Wool Fibers (*Jocić, Infante, Erra*) 486
Do, B. T. Infrared Absorption Studies of Fabrics (*Carr, Sarma, Johnson, Williamson, Perkins*) 725
Dodd, K. J. The Relationship Between Hygral Expansion and Measured Set of Piece-Dyed Worsted Fabrics (*Carr, Baird*) 902
Dolling, M. Fabric-Evoked Prickle in Worsted Spun Single Jersey Fabrics Part I: The Role of Fiber End Diameter Characteristics (*Naylor, Phillips, Veitch, Marland*) 288
Dolcet, L. M. FTIR Analysis to Study Chemical Changes in Wool Following a Sulfitolysis Treatment (*Erra, Gómez, Juliá, Lewis, Willoughby*) 397
Dréan, Jean Yves Mechanical Behavior of the Plain Weave Structure Using Energy Methods: Fabric Uniaxial Extension (*Sinoimeri*) 370
Predicting the Mechanical Properties of Nonwoven Geotextiles with the Finite Element Method (*Liao, Adanur*) 753
Duffner, H. New Mathematical Model for Determining Time-Dependent Adsorption and Diffusion of Dyes into Fibers Through Dye Sorption Curves in Combination Shades Part I: Mathematical Fundamentals (*Cleve, Bach, Denter, Schollmeyer*) 701
Durand, Bernard Instrumental Measurement and Macroscopical Study of Sanding and Raising (*Bueno, Viallier, Renner, Lamy*) 779

Easter, Elizabeth P. Durability and Aesthetic Properties of Kenaf/Cotton Blend Fabrics (*Ramaswamy*) 803
El-Garf, S. A. Modifying Nylon 6 by Treating with Dichlorobenzenesulfonyl Chloride (*El-Kemry*) 13
El-Kemry, S. M. Modifying Nylon 6 by Treating with Dichlorobenzenesulfonyl Chloride (*El-Garf*) 13
Enomoto, Masao Physical Properties of Polyurethane Blend Dope-Coated Fabrics (*Suehiro, Muraoka, Inoue, Sumita*) 601
Eriksson, Karl-Erik L. Effect of Retting Enzymes on the Structure and Composition of Flax Cell Walls (*Akin, Morrison, Gamble, Rigsby, Henriksson*) 279
Influence of Chelating Agents and Mechanical Pretreatment on Enzymatic Retting of Flax (*Henriksson, Akin, Rigsby, Patel*) 829

Erra, P. FTIR Analysis to Study Chemical Changes in Wool Following a Sulfitolysis Treatment (*Gómez, Dolcet, Julià, Lewis, Willoughby*) 397
Reaction of a New Thiol Cationic Surfactant with Bunte Salt in Wool Fibers (*Diz, Jocić, Infante*) 486
Espinosa-Jiménez, M. Absorption of N-Cetylpyridinium Chloride on Leacril Fibers: Kinetics and Thermodynamics (*Giménez-Martin, Ontiveros-Ortega*) 677
Ethridge, M. Dean Predicting Hairiness for Ring and Rotor Spun Yarns and Analyzing the Impact of Fiber Properties (*Zhu*) 694
Evans, David J. Cleavage of Integral Surface Lipids of Wool by Aminolysis (*Lanczki*) 435

Fan, J. Compatibility of Outer and Fusible Interlining Fabrics in Tailored Garments Part I: Desirable Range of Mechanical Properties of Fused Composites (*Leeuwner, Hunter*) 137
Part II: Relationship Between Mechanical Properties of Fused Composites and Those of Outer and Fusible Interlining Fabrics (*Leeuwner, Hunter*) 194
Part III: Selecting Fusible Interlinings (*Leeuwner, Hunter*) 258
Fang, Chaoying Chromatic Image Analysis for Cotton Trash and Color Measurements (*Xu, Huang, Watson*) 881
Fang, H. H. Woolen Ring-Frame Drafting (*Lee, Cassidy*) 163
Fann, Daw-ming Processing Characteristics of Recycled Poly(ethylene Terephthalate) as Melt Spun Fibers (*Huang, Lee*) 891
Faught, Sherman E. Theoretical and Experimental Profiles of Fiber Fineness and Maturity Using the Shirley Micromat and the Zellweger Uster Advanced Fiber Information System Module (*Gordon, Montalvo, Grimball, Watkins*) 545
Fujishige, Shouei Identifying Cashmere and Merino Wool Fibers (*Koshiba*) 619

Gamble, G. R. Effect of Retting Enzymes on the Structure and Composition of Flax Cell Walls (*Akin, Morrison, Rigsby, Henriksson, Eriksson*) 279
Gardner, R. P. A Preliminary Investigation of a Beta-Particle Transmission Gauge for Seam Quality Determination (*Titus, Clapp, Zhu*) 23
Gatewood, Barbara M. Influence of Pattern Design and Fabric Type on the Hand Characteristics of Pigment Prints (*Robinson, Chambers*) 837
Genovez, M. C. Controlling Exhaustion of Reactive Dyes on Wool by Microencapsulation with Liposomes (*Gomes, Hrdina*) 537
Ghith, A. Modeling and Simulation of a Falling Yarn with One End Fixed (*Bruniaux, Koncar, Vasseur*) 321
Ghosh, Tushar K. On-Line Measurement of Fabric Bending Behavior Part I: Theoretical Study of Static Fabric Loops (*Zhou*) 712
Giménez-Martin, E. Absorption of N-Cetylpyridinium Chloride on Leacril Fibers: Kinetics and Thermodynamics (*Espinosa-Jiménez, Ontiveros-Ortega*) 677
Gomes, J. I. N. R. Controlling Exhaustion of Reactive Dyes on Wool by Microencapsulation with Liposomes (*Genovez, Hrdina*) 537
Gómez, N. FTIR Analysis to Study Chemical Changes in Wool Following a Sulfitolysis Treatment (*Erra, Dolcet, Julià, Lewis, Willoughby*) 397
Gordon, Stuart G. Theoretical and Experimental Profiles of Fiber Fineness and Maturity Using the Shirley Micromat and the Zellweger Uster Advanced Fiber Information System Module (*Montalvo, Faught, Grimball, Watkins*) 545
Grasso, Maureen M. Effect of Textile Properties in Evaluating a Directional Shading Fabric (*Hunn, Rewerts*) 233
Grimball, Robert T. Theoretical and Experimental Profiles of Fiber Fineness and Maturity Using the Shirley Micromat and the Zellweger Uster Advanced Fiber Information System Module (*Gordon, Montalvo, Faught, Watkins*) 545
Gu, X. Deformation Micromechanics in Model Carbon Fiber Reinforced Composites Part II: The Microbond Test (*Young*) 93
Gupta, B. S. A Generalized Model for Predicting Load-Extension Properties of Woven Fabrics (*Sun, Seyam*) 866

Hansen, Steven H. A Computer Simulation Approach for Engineering Air-Jet Spun Yarns (*Rajamanickam, Jayaraman*) 223
Analysis of the Modeling Methodologies for Predicting the Strength of Air-Jet Spun Yarns (*Rajamanickam, Jayaraman*) 39
Harper, R. J. Cotton Fabrics Produced with Twistless Wrap Spun Yarns (*Ruppenicker, Sawhney, Calamari*) 198
Hatch, Kathryn L. *In Vivo* Cutaneous and Perceived Comfort Response to Fabric Part VI: The Effect of Moist Fabrics on Stratum Corneum Hydration (*Prato, Zeronian, Maibach*) 926
Henriksson, Gunnar Effect of Retting Enzymes on the Structure and Composition of Flax Cell Walls (*Akin, Morrison, Gamble, Rigsby, Eriksson*) 279
Influence of Chelating Agents and Mechanical Pretreatment on Enzymatic Retting of Flax (*Akin, Rigsby, Patel, Eriksson*) 829
Horr, Thomas J. A Description of the Wool Fiber Surface Based on Contact Angle Measurements 1
How, Yanlai Studies of JetRing Spinning Part I: Reducing Yarn Hairiness with the JetRing (*Wang, Miao*) 253
Hrdina, R. Controlling Exhaustion of Reactive Dyes on Wool by Microencapsulation with Liposomes (*Gomes, Genovez*) 537
Hsieh, Y.-L. Strength and Crystalline Structure of Developing Acala Cotton (*Hu, Nguyen*) 529
Hsiung, Han-Hsing Absorption Kinetics of Direct Dye on Cotton from Finite Baths (*Chen*) 77
Hu, Jin-Lian The KES Shear Test for Fabrics (*Zhang*) 654
Hu, Yen-Jung Effects of On-Line Heat Treatment During High Speed Spinning of Polyester Filaments on Dye Uptake (*Wang*) 428
Hu, X.-P. Strength and Crystalline Structure of Developing Acala Cotton (*Hsieh, Nguyen*) 529
Huang, Robin Chromatic Image Analysis for Cotton Trash and Color Measurements (*Xu, Fang, Watson*) 881
Huang, Steve K. Processing Characteristics of Recycled Poly(ethylene Terephthalate) as Melt Spun Fibers (*Fann, Lee*) 891
Hunn, Bruce D. Effect of Textile Properties in Evaluating a Directional Shading Fabric (*Grasso, Rewerts*) 233
Hunter, L. Compatibility of Outer and Fusible Interlining Fabrics in Tailored Garments Part I: Desirable Range of Mechanical Properties of Fused Composites (*Fan, Leeuwner*) 137
Part II: Relationship Between Mechanical Properties of Fused Composites and Those of Outer and Fusible Interlining Fabrics (*Fan, Leeuwner*) 194
Part III: Selecting Fusible Interlinings (*Fan, Leeuwner*) 258
Infante, M. R. Reaction of a New Thiol Cationic Surfactant with Bunte Salt in Wool Fibers (*Diz, Jocić, Erra*) 486

Inoue, Kiyohiro Physical Properties of Polyurethane Blend Dope-Coated Fabrics (*Enomoto, Suehiro, Muraoka, Sumita*) 601
Inoue, Mari Tensile and Tensile Stress Relaxation Properties of Wool/Cotton Plied Yarns (*Niwa*) 378
Inoue, Y. High Speed Yarn Production with Air-Jet Spinning: Effects of Some Fiber Parameters (*Bhortakke, Nishimura, Matsuo, Morihashi*) 101
Ishikawa, Kinzo Evaluating Quasi-Clothing Heat Transfer: A Comparison of the Vertical Hot Plate and the Thermal Manikin (*Satsumoto, Takeuchi*) 503
Itoh, Motoyoshi Analyzing the Compressibility of a Random Fiber Mass Based on the Modified Theory of Fiber Contact (*Komori*) 204

Jasper, Warren J. Controlling Nylon Dyeing by Dye and Chemical Metering (*McGregor, Arora*) 609
Correlating Optical and Kinetic Deviations from Ideality in Fiber Reactive Dye Mixtures (*Snyder, Berkstresser, Smith, Beck, McGregor*) 571
Effects of Temperature and Salt on Dye Mixtures in the Batch Dyeing Process (*Reddy, McGregor, Lee*) 109
Jayaraman, Sundaresan A Computer Simulation Approach for Engineering Air-Jet Spun Yarns (*Rajamanickam, Hansen*) 223
Analysis of the Modeling Methodologies for Predicting the Strength of Air-Jet Spun Yarns (*Rajamanickam, Hansen*) 39
Jeon, Byong Dae Effect of Pre-existing Dyes and Fabric Type on Cellulase Treatment of Cotton Fabrics (*Choe, Cha*) 155
Jocić, D. Reaction of a New Thiol Cationic Surfactant with Bunte Salt in Wool Fibers (*Diz, Infante, Erra*) 486
Johnson, M. R. Infrared Absorption Studies of Fabrics (*Carr, Sarma, Do, Williamson, Perkins*) 725
Joko, Kyohei DSC Studies of the Melting Behavior of α-Form Crystallites in Wool Keratin (*Cao, Cook*) 117
Juliá, M. R. FTIR Analysis to Study Chemical Changes in Wool Following a Sulfitolysis Treatment (*Erra, Gómez, Dolcet, Lewis, Willoughby*) 397

Kang, In-Sook Ester Crosslinking of Cotton Fabric by Polymeric Carboxylic Acids and Citric Acid (*Yang, Wang*) 334
Kang, Tae Jin Objective Rating of Seam Pucker Using Neural Networks (*Park*) 494
Kawahara, Yutaka Microvoids in Wild Silk Fibers (*Shioya*) 385
Kiekens, Paul Optimizing the Fiber-to-Yarn Production Process with a Combined Neural Network/Genetic Algorithm Approach (*Sette, Boullart, Van Langenhove*) 84
Resilience Properties of Polypropylene Carpets (*Vangheluwe*) 671
Simulation of Procedures to Avoid Set Marks in Weaving Caused by Relaxation (*Vangheluwe*) 34
Kikutani, Takeshi High-Speed Melt Spinning of Sheath-Core Bicomponent Polyester Fibers: High and Low Molecular Weight Poly(ethylene Terephthalate) Systems (*Radhakrishnan, Okui*) 684
Kim, Ik-Soo Dyeing Polyester Fibers with 1,4-Diaminoanthraquinone in the Presence of Dialkyldimethylammonium Bromide (*Kono, Takagishi*) 555
Influence of Alkyl Chain Length of Dialkyldimethylammonium Bromide on Disperse Dyeing of Nylon 6 Fibers (*Kono, Takagishi*) 664
Low Temperature Disperse Dyeing of Polyester and Nylon 6 Fibers in the Presence of Didodecyldimethylammonium Bromide (*Kono, Takagishi*) 767
Kimmel, L. B. Air and Ring Combination in Tandem Spinning (*Sawhney*) 217
King, Marcus J. Impact Cutting of Wool 580
Komiyama, J. Protein Soil Release Using Protease as Monitored with a Quartz Crystal Microbalance (*Shimomura, Onozawa*) 348
Komori, Takashi Analyzing the Compressibility of a Random Fiber Mass Based on the Modified Theory of Fiber Contact (*Itoh*) 204
Koncar, Vladan Modeling and Simulation of a Falling Yarn with One End Fixed (*Ghith, Bruniaux, Vasseur*) 321
Multirate Predictive Control with Nonlinear Optimization Application to a Thermal Process for Batch Dyeing (*Koubaa, Legrand, Bruniaux, Vasseur*) 788
Konda, Fujio Analysis of Yarn Tension in the Yarn-Forming Zone in Friction Spinning (*Merati, Okamura, Marui*) 643
Kong, L. X. Computational Two-Phase Air/Fiber Flow Within Transfer Channels of Rotor Spinning Machines (*Platfoot*) 269
Kono, Kenji Dyeing Polyester Fibers with 1,4-Diaminoanthraquinone in the Presence of Dialkyldimethylammonium Bromide (*Kim, Takagishi*) 555
Influence of Alkyl Chain Length of Dialkyldimethylammonium Bromide on Disperse Dyeing of Nylon 6 Fibers (*Kim, Takagishi*) 664
Low Temperature Disperse Dyeing of Polyester and Nylon 6 Fibers in the Presence of Didodecyldimethylammonium Bromide (*Kim, Takagishi*) 767
Koshiba, Yukie Identifying Cashmere and Merino Wool Fibers (*Fujishige*) 619
Koubaa, Mohamed Ali Multirate Predictive Control with Nonlinear Optimization Application to a Thermal Process for Batch Dyeing (*Koncar, Legrand, Bruniaux, Vasseur*) 788
Krooshof, Gerard Thermal Impact Damage of Polyamide and Polyester Yarns (*Versluis, van Gulick*) 211
Krucinska, I. Numerical Investigation of Intrinsic Mechanical Properties of Carbon Fibers (*Krucinski*) 316
Krucinski, S. Numerical Investigation of Intrinsic Mechanical Properties of Carbon Fibers (*Krucinska*) 316
Kuo, Wen-Shyong Topology of Three-Dimensionally Braided Fabrics Using Pultruded Rods as Axial Reinforcements 623
Kure, Julie M. The Glass Transition of Wool: An Improved Determination Using DSC (*Pierlot, Russell, Shanks*) 18

Lamy, Bernard Instrumental Measurement and Macroscopical Study of Sanding and Raising (*Bueno, Viallier, Durand, Renner*) 779
Lanczki, Miklos Cleavage of Integral Surface Lipids of Wool by Aminolysis (*Evans*) 435
Lau, Y. M. Torque-Balanced Singles Knitting Yarns Spun by Unconventional Systems Part I: Cotton Rotor Spun Yarn (*Tao, Lo*) 739
Part II: Cotton Friction Spun DREF III Yarn (*Tao*) 815
Lee, C. S. P. Woolen Ring-Frame Drafting (*Cassidy*) 163
Lee, Gordon Effects of Temperature and Salt on Dye Mixtures in the Batch Dyeing Process (*Reddy, Jasper, McGregor*) 109
Lee, Jiunn-yih Processing Characteristics of Recycled Poly(ethylene Terephthalate) as Melt Spun Fibers (*Fann, Huang*) 891
Leeuwner, W. Compatibility of Outer and Fusible Interlining Fabrics in Tailored Garments Part I: Desirable Range of Mechanical Properties of Fused Composites (*Fan, Hunter*) 137
Part II: Relationship Between Mechanical Properties of Fused Composites and Those of Outer and Fusible Interlining Fabrics (*Fan, Hunter*) 194
Part III: Selecting Fusible Interlinings (*Fan, Hunter*) ... 258

Legrand, Xavier Multirate Predictive Control with Nonlinear Optimization Application to a Thermal Process for Batch Dyeing (*Koncar, Koubaa, Bruniaux, Vasseur*) 788
Lewis, D. M. FTIR Analysis to Study Chemical Changes in Wool Following a Sulfitolysis Treatment (*Erra, Gómez, Dolcet, Juliá, Willoughby*) 397
Liao, Tianyi Predicting the Mechanical Properties of Nonwoven Geotextiles with the Finite Element Method (*Adanur, Dréan*) 753
Lo, W. K. Torque-Balanced Singles Knitting Yarns Spun by Unconventional Systems Part I: Cotton Rotor Spun Yarn (*Tao, Lau*) 739
Lopez, O. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Coderch, de la Maza, Manich, Parra, Cegarra*) 131
Lui, Kam-che Kalina Air Interlaced Self-Twist Yarns (*Miao*) 188

Maibach, Howard I. *In Vivo* Cutaneous and Perceived Comfort Response to Fabric Part VI: The Effect of Moist Fabrics on Stratum Corneum Hydration (*Hatch, Prato, Zeronian*) 926
Manich, A. M. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Coderch, Lopez, de la Maza, Parra, Cegarra*) 131
Multilamellar Liposomes Including Cholesterol as Carriers of a 1:2 Metal Complex Dye in Wool Dyeing (*de la Maza, Coderch, Parra, Serra*) 325
Marland, D. J. Fabric-Evoked Prickle in Worsted Spun Single Jersey Fabrics Part I: The Role of Fiber End Diameter Characteristics (*Naylor, Phillips, Veitch, Dolling*) 288
Marui, Etsuo Analysis of Yarn Tension in the Yarn-Forming Zone in Friction Spinning (*Merati, Konda, Okamura*) 643
Matsuda, Chikako Temperature Effect on Dissipation of Triboelectric Charge into Air from Textile Surfaces (*Onogi, Sugiura*) 45
Matsuo, T. High Speed Yarn Production with Air-Jet Spinning: Effects of Some Fiber Parameters (*Bhortakke, Nishimura, Inoue, Morihashi*) 101
McGregor, Ralph A Dimensionless Model for the Equilibrium Sorption of Mixtures of Acid Dyes by Polyamides from Finite Dyebaths (*Arora*) 389
Controlling Nylon Dyeing by Dye and Chemical Metering (*Arora, Jasper*) 609
Correlating Optical and Kinetic Deviations from Ideality in Fiber Reactive Dye Mixtures (*Snyder, Berkstresser, Smith, Beck, Jasper*) 571
Effects of Temperature and Salt on Dye Mixtures in the Batch Dyeing Process (*Reddy, Jasper, Lee*) 109
Merati, Ali Akbar Analysis of Yarn Tension in the Yarn-Forming Zone in Friction Spinning (*Konda, Okamura, Marui*) 643
Miao, Menghe Air Interlaced Self-Twist Yarns (*Lui*) 188
Reducing Yarn Hairiness with an Air-Jet Attachment During Winding (*Wang*) 481
Studies of JetRing Spinning Part I: Reducing Yarn Hairiness with the JetRing (*Wang, How*) 253
Montalvo, Joseph G. Jr. Theoretical and Experimental Profiles of Fiber Fineness and Maturity Using the Shirley Micromat and the Zellweger Uster Advanced Fiber Information System Module (*Gordon, Faught, Grimball, Watkins*) 545
Morihashi, T. High Speed Yarn Production with Air-Jet Spinning: Effects of Some Fiber Parameters (*Bhortakke, Nishimura, Matsuo, Inoue*) 101
Morrison, W. H. III Effect of Retting Enzymes on the Structure and Composition of Flax Cell Walls (*Akin, Gamble, Rigsby, Henriksson, Eriksson*) 279
Muraoka, Yoichiro Physical Properties of Polyurethane Blend Dope-Coated Fabrics (*Enomoto, Suehiro, Inoue, Sumita*) 601
Murthy, N. Sanjeeva Fibrillar Structure and Its Relevance to Diffusion, Shrinkage, and Relaxation Processes in Nylon Fibers 511

Naik, Arun Frictional Behavior of Textile Fabrics Part I: Sliding Phenomena of Fabrics on Metallic and Polymeric Solid Surfaces (*Virto*) 793
Naylor, G. R. S. Fabric-Evoked Prickle in Worsted Spun Single Jersey Fabrics Part I: The Role of Fiber End Diameter Characteristics (*Phillips, Veitch, Dolling, Marland*) 288
Part II: The Role of Fiber Length, Yarn Count, and Fabric Cover Factor (*Phillips*) 354
Part III: Wear Trial Studies of Absolute Fabric Acceptability (*Phillips*) 413
Neckář, Bohuslav Compression and Packing Density of Fibrous Assemblies 123
Nguyen, A. Strength and Crystalline Structure of Developing Acala Cotton (*Hsieh, Hu*) 529
Nishimura, T. High Speed Yarn Production with Air-Jet Spinning: Effects of Some Fiber Parameters (*Bhortakke, Matsuo, Inoue, Morihashi*) 101
Niwa, Masako Tensile and Tensile Stress Relaxation Properties of Wool/Cotton Plied Yarns (*Inoue*) 378

Okamura, Masaaki Analysis of Yarn Tension in the Yarn-Forming Zone in Friction Spinning (*Merati, Konda, Marui*) 643
Okui, Norimasa High-Speed Melt Spinning of Sheath-Core Bicomponent Polyester Fibers: High and Low Molecular Weight Poly(ethylene Terephthalate) Systems (*Radhakrishnan, Kikutani*) 684
Onogi, Yoshihiko Temperature Effect on Dissipation of Triboelectric Charge into Air from Textile Surfaces (*Sugiura, Matsuda*) 45
Onozawa, H. Protein Soil Release Using Protease as Monitored with a Quartz Crystal Microbalance (*Shimomura, Komiyama*) 348
Ontiveros-Ortega, A. Absorption of N-Cetylpyridinium Chloride on Leacril Fibers: Kinetics and Thermodynamics (*Espinosa-Jiménez, Giménez-Martin*) 677

Pailthorpe, M. T. Effect of Glow Discharge-Polymer Treatments on the Shrinkage Behavior and Physical Properties of Wool Fabric (*Zuchairah, David*) 69
Pan, Ning Micromechanics of a Planar Hybrid Fibrous Network (*Chen, Seo, Backer*) 907
Shear Strength of Fibrous Sheets: An Experimental Investigation (*Zhang*) 593
Park, Chang Kyu Objective Rating of Seam Pucker Using Neural Networks (*Kang*) 494
Park, Sang Il Heat and Mass Transfer Analysis of Fabric in the Tenter Frame (*Baik*) 311
Park, Soon Young Effect of Pre-existing Dyes and Fabric Type on Cellulase Treatment of Cotton Fabrics (*Choe, Cha, Jeon*) 155
Parra, J. L. Internal Lipid Wool Structure Modification Due to a Nonionic Auxiliary Used in Dyeing at Low Temperatures (*Coderch, de la Maza, Manich, Cegarra*) 131

Multilamellar Liposomes Including Cholesterol as Carriers of a 1:2 Metal Complex Dye in Wool Dyeing (*de la Maza, Coderch, Manich, Serra*) 325
Patel, Nirav Influence of Chelating Agents and Mechanical Pretreatment on Enzymatic Retting of Flax (*Henriksson, Akin, Rigsby, Eriksson*) 829
Perkins, W. A. Infrared Absorption Studies of Fabrics (*Carr, Sarma, Johnson, Do, Williamson*) 725
Phillips, D. G. Fabric-Evoked Prickle in Worsted Spun Single Jersey Fabrics Part I: The Role of Fiber End Diameter Characteristics (*Naylor, Veitch, Dolling, Marland*) 288
Part II: The Role of Fiber Length, Yarn Count, and Fabric Cover Factor (*Naylor*) 354
Part III: Wear Trial Studies of Absolute Fabric Acceptability (*Naylor*) 413

SUBJECT INDEX

Acrylics
Leacril fibers: absorption of N-CP-Cl for improved dyeing; kinetics and thermodynamics *Espinosa-Jiménez, Giménez-Martin, Ontiveros-Ortega* 677
prickle in single jersey knits: role of fiber length, yarn count, fabric cover factor *Naylor, Phillips* 354
single jersey knits: fabric-evoked prickle; role of fiber end diameter characteristics *Naylor, Phillips, Veitch, Dolling, Marland* 288

Ballistics
fabric impact behavior: simple analytical model of composite body armor *Chocron-Benloulo, Rodríguez, Sánchez-Gálvez* 520
Bast Fibers
enzymatic retting of flax: influence of chelating agents and mechanical pretreatment *Henriksson, Akin, Rigsby, Patel, Eriksson* 829
kenaf and cotton blends: durability and aesthetic properties *Ramaswamy, Easter* 803
retting flax with enzymes: effect on structure and composition of cell walls *Akin, Morrison, Gamble, Rigsby, Henriksson, Eriksson* 279
Bending
fabric bending behavior: theoretical study of static fabric loops *Zhou, Ghosh* 712
of carbon fibers: numerical investigation of intrinsic mechanical properties *Kruscinska, Krucinski* 316
Bleaching
of jute: low temperature peracetic acid system *Cai, David* 459
of wool fibers: FTIR analysis to study chemical changes after sulfitolysis treatment *Erra, Gómez, Dolcet, Juliá, Lewis, Willoughby* 397
Blends
air-jet spinning of cotton/poly: high speed yarn production; effects of fiber parameters *Bhortakke, Nishimura, Matsuo, Inoue, Morihashi* 101
Bonding
in reinforced composites: deformation micromechanics in carbon fiber composites; microbond test *Gu, Young* 93
Braiding
braided composite fabrics: topology of 3D fabrics reinforced axially with pultruded rods *Kuo* 623
Carbon Fibers
in reinforced composites: deformation micromechanics in; microbond test *Gu, Young* 93
intrinsic mechanical properties: numerical investigation of bending *Kruscinska, Krucinski* 316
Carding
bulk fiber mass in: modeling diffusive transport *Wibberly, Roberts* 296
machine design: optimal design of cylindrical shell *Stadnicki* 6
Carpets
appearance loss in: image analysis of; structural factors *Presley* 174
polypropylene carpets: resilience properties determined by viscoelastic measurements *Vangheluwe, Kiekens* 671
Cashmere
and wool fibers: identifying differences with optical microscopy *Fujishige, Koshiba* 619
image analysis of fibers: large-scale fiber application; also lambswool *Robson* 747
Catalysis
effect on DP finishes: effect on thermal characteristics of cotton citric acid finishes *Trask-Morrell, Andrews* 846
Chromatography
to study wool lipids: cleavage by aminolysis; TLC, HPLC, GC/MS studies *Evans, Lanczki* 435
Clothing
evaluating heat transfer: comparison of vertical hot plate and thermal manikin *Satsumoto, Ishikawa, Takeuchi* 503
fabric end-uses: characterizing by physical properties *Chen, Collier* 247
fusible interlinings: compatibility of outer and interlinings; selecting appropriate lining *Fan, Leeuwner, Hunter* 258
fusible interlinings: compatibility of outer and lining fabrics; mechanical properties of fused composites *Fan, Leeuwner, Hunter* 137
fusible interlinings: mechanical properties of fusible composites and outer and interlining fabrics *Fan, Leeuwner, Hunter* 194
modeling drape: simulation of falling yarn with one end fixed *Ghith, Bruniaux, Koncar, Vasseur* 321
seam pucker in: objective rating using neural networks and a laser sensor *Park, Kang* 494

seam quality of: beta-particle transmission gauge *Titus, Clapp, Zhu, Gardner* 23
Clothing, Protective
fabric ballistic impacts: simple analytical model of composite body armor *Chocron-Benloulo, Rodríguez, Sánchez-Gálvez* 520
surgical gown materials: effect of dual function finish with antibiotic and blood repellent *Cho, Cho* 875
Comfort
evaluating heat transfer: comparison of vertical hot plate and thermal manikin *Satsumoto, Ishikawa, Takeuchi* 503
improving fabric touch: measurement and macroscopical study of sanding and raising *Bueno, Viallier, Durand, Renner, Lamy* 779
moist fabrics on skin: in vivo cutaneous and perceived comfort response; stratum corneum hydration *Hatch, Prato, Zeronian, Maibach* 926
of natural and synthetic fibers: effect of fiber and film moisture content on stratum corneum hydration *Cameron, Brown, Dallas, Brandt* 585
of waterproofed nylon: physical properties of polyurethane blend dope-coated fabrics *Enomoto, Suehiro, Muraoka, Inoue, Sumita* 601
prickle in single jersey wools: wear trial studies of fabric acceptability *Naylor, Phillips* 413
Composites
ballistics fabrics: simple analytical model of composite body armor *Chocron-Benloulo, Rodríguez, Sánchez-Gálvez* 520
bicomponent polyester fibers: high speed melt spinning; high and low molecular weight PET systems *Radhakrishnan, Kikutani, Okui* 684
braided reinforced fabrics: topology of 3D fabrics reinforced axially with pultruded rods *Kuo* 623
carbon fiber reinforced: deformation micromechanics in; microbond test *Gu, Young* 93
fusible interlinings: compatibility of outer and interlinings; selecting appropriate lining *Fan, Leeuwner, Hunter* 258
fusible interlinings: compatibility of outer and lining fabrics; mechanical properties of fused composites *Fan, Leeuwner, Hunter* 137
fusible interlinings: mechanical properties of fusible composites and outer and interlining fabrics *Fan, Leeuwner, Hunter* 194
tandem spinning of: air and ring combination spinning of cotton/poly composite yarns *Sawhney, Kimmel* 217
Compression
in fibrous assemblies: analysis of compression and packing density *Neckář* 123
of polypropylene carpets: resilience properties determined by viscoelastic measurements *Vangheluwe, Kiekens* 671
of random fiber mass: analyzing compressibility based on modified theory of fiber contact *Komori, Itoh* 204
Computer Techniques
cleaned cotton study: effects of card wire condition on white specks *Bel-Berger, Von Hoven* 857
for air-jet spun yarns: computer simulation approach for engineering *Rajamanickam, Hansen, Jayaraman* 223
for batch dyeing: effect of temperature and salt on dye mixtures *Reddy, Jasper, McGregor, Lee* 109
for predicting yarn strength: modeling methods to predict strength of air-jet spun yarns *Rajamanickam, Hansen, Jayaraman* 39
to measure cotton trash: chromatic image analysis *Xu, Fang, Huang, Watson* 881
to rate seam pucker: objective rating using neural networks and a laser sensor *Park, Kang* 494
to study carbon fibers: numerical investigation of intrinsic mechanical properties *Kruscinska, Krucinski* 316
to study cashmere: image analysis of fibers; large-scale fiber application; also lambswool *Robson* 747
to study cotton cleanability: modeling fiber breakage *Robert, Blanchard* 417
to study fabric defects: training-free counter propagation neural network for pattern recognition *Rajasekaran* 401
to study nonwoven fibers: orientation determined with Hough transform image analysis *Xu, Yu* 563
to study nonwovens: flow field analysis of fiber orientation *Pourdeyhimi, Dent* 181
to study nonwovens: image analysis of fiber orientation using Fourier transform *Pourdeyhimi, Dent, Davis* 143
to study nylon carpets: image analysis of appearance loss; structural factors *Presley* 174
Cotton Fabrics
direct dyeing of: absorption kinetics of dye from finite baths *Hsiung, Chen* 77
DP finished: effect of catalysts on thermal characteristics of cotton citric acid finishes *Trask-Morrell, Andrews* 846
enzyme treated: effect of pre-existing dyes and fabric type on cellulase treatment *Choe, Park, Cha, Jeon* 155
ester crosslinking of: polymeric carboxylic acid and citric acid *Yang, Wang, Kang* 334
flat set of plain weft knits: degree and stability; effect of various relaxation treatments *Phukan, Subramaniam* 707
from twistless yarns: wrap spun yarns versus ring spun yarns *Ruppenicker, Sawhney, Calamari, Harper* 198
improved fabric touch: measurement and macroscopical study of sanding and raising *Bueno, Viallier, Durand, Renner, Lamy* 779
indigo dyed: environmental impact reduced by indirect electrolysis *Bechtold, Burtscher, Turcanu, Bobleter* 635
IR absorption in: evaluation of IR emitters for heating and drying fabrics *Carr, Sarma, Johnson, Do, Williamson, Perkins* 725
jute/cotton blends: low temperature bleaching using a peracetic acid system *Cai, David* 459
kenaf and cotton blends: durability and aesthetic properties *Ramaswamy, Easter* 803
moist fabric on skin: in vivo cutaneous and perceived comfort response; stratum corneum hydration *Hatch, Prato, Zeronian, Maibach* 926
moisture tranfer in: effect of fiber and film moisture content on stratum corneum hydration; also synthetics *Cameron, Brown, Dallas, Brandt* 585
nonwovens: in-plane shear strength of fibrous sheets *Pan, Zhang* 593
pigment print handle: influence of pattern design and fabric type *Robinson, Chambers, Gatewood* 837
seam quality of: beta-particle transmission gauge *Titus, Clapp, Zhu, Gardner* 23
single jersey knits: effects of yarn and fabric construction on spirality *Tao, Dhingra, Chan, Abbas* 57
static electricity in: temperature effect on dissipation into air *Onogi, Sugiura, Matsuda* 45
surgical gown materials: effect of dual function finish with antibiotic and blood repellent *Cho, Cho* 875
frictional behavior of: sliding phenomena on metallic and polymeric solid surfaces *Virto, Naik* 793
Cotton Fibers
air-jet spinning of blends: high speed yarn production; effects of fiber parameters *Bhortakke, Nishimura, Matsuo, Inoue, Morihashi* 101
cleanability of: modeling fiber breakage *Robert, Blanchard* 417
developing Acala cotton: strength and crystalline structure *Hsieh, Hu, Nguyen* 529
dye diffusion in: model for time-dependent adsorption and diffusion through dye sorption curves *Cleve, Bach, Denter, Duffner, Schollmeyer* 701
fiber-to-yarn production: optimizing process with combined neural network/genetic algorithm approach *Boullart, Van Langenhove, Kiekens* 84
fibrogram measurements: new interpretation *Chu, Riley* 897

fineness and maturity: theoretical and experimental profiles; Micromat, AFIS, NIR study *Gordon, Montalvo, Faught, Grimball, Watkins* 545
hairiness of cotton yarns: neural networks to predict for ring and rotor spun yarns; impact of fiber properties *Zhu, Ethridge* 694
hairiness of: air-jet attachment to reduce in cotton fibers during winding *Wang, Miao* 481
mechanical cleaning of: effects of card wire condition on white specks *Bel-Berger, Von Hoven* 857
polyester/cotton blends: weft insertion of yarns on air-jet looms; neural network model *Vangheluwe* 809
singles knitting yarns: torque-balanced cotton friction spun DREF III yarn *Lau, Tao* 815
singles spun yarns: torque-balanced rotor spun knitting yarns *Tao, Lo, Lau* 739
tandem spinning of: air and ring combination spinning of cotton/poly composite yarns *Sawhney, Kimmel* 217
tensile properties of blends: effects of humidity and blend ratio on tensile stress relaxation *Inoue, Niwa* 378
trash and color measurements: chromatic image analysis *Xu, Fang, Huang, Watson* 881

Crimp
of plain weave structure: mechanical behavior using energy methods; fabric uniaxial extension *Sinomeri, Dréan* 370
of random fiber mass: analyzing compressibility based on modified theory of fiber contact *Komori, Itoh* 204

Crosslinking
ester crosslinking: polymeric carboxylic acid and citric acid on cotton *Yang, Wang, Kang* 334

Crystallinity
of developing Acala cotton: strength and crystalline structure *Hsieh, Hu, Nguyen* 529
of wild silk fibers: microvoids in; x-ray study *Kawahara, Shioya* 385

Cuticle
dye diffusion in wool: restricted transcellular diffusion mechanism *Wortmann, Wortmann, Zahn* 720
integral surface lipids of wool: cleavage by aminolysis *Evans, Lanczki* 435

Deformation
in reinforced composites: deformation micromechanics in carbon fiber composites; microbond test *Gu, Young* 93
KES shear test for fabrics: improved results by treating fabric as an orthotropic sheet *Hu, Zhang* 654
micromechanics of: planar hybrid fibrous network *Pan, Chen, Seo, Backer* 907

Detergency
protein soil release: protease monitored by quartz crystal microbalance *Shimomura, Onozawa, Komiyama* 348

Differential Scanning Calorimetry
of wool: improved determination of glass transition *Kure, Pierlot, Russell, Shanks* 18
thermal analysis of wool: DSC studies of melting behavior of crystallites in wool keratin *Cao, Joko, Cook* 117

Drafting
ring-frame: effect of drafting zone variables on twist in wools *Fang, Lee, Cassidy* 163
roller drafting: fiber motion monitoring using tracer fibers *Weber, Wulfhorst* 10

Drape
fabric bending behavior: theoretical study of static fabric loops *Zhou, Ghosh* 712
modeling and simulation of: falling yarn with one end fixed *Ghith, Bruniaux, Koncar, Vasseur* 321
of fusible interlinings: compatibility of outer and interlinings; selecting appropriate lining *Fan, Leeuwner, Hunter* 258
of fusible interlinings: compatibility of outer and lining fabrics; mechanical properties of fused composites *Fan, Leeuwner, Hunter* 137
of fusible interlinings: mechanical properties of fusible composites and outer and interlining fabrics *Fan, Leeuwner, Hunter* 194

Durable Press
effect of catalysts on: effect on thermal characteristics of cotton citric acid finishes *Trask-Morrell, Andrews* 846
ester crosslinking: polymeric carboxylic acid and citric acid on cotton *Yang, Wang, Kang* 334

Dyeing
batch dyeing process: effect of temperature and salt on dye mixtures *Reddy, Jasper, McGregor, Lee* 109
batch dyeing thermal process: multirate predictive control with nonlinear optimization application *Koncar, Koubaa, Legrand, Bruniaux, Vasseur* 788
disperse dyeing of nylon and PET: low temperature dyeing in the presence of DDDMAB *Kim, Kono, Takagishi* 767
disperse dyeing of nylon: influence of alkyl chain length of DADMAB *Kim, Kono, Takagishi* 664
disperse dyeing of polyester: dyeing in presence of double-tailed surfactant *Kim, Kono, Takagishi* 555
improved wool dyeing: reaction of a new thiol cationic surfactant with bunte salt *Diz, Jocić, Infante, Erra* 486
low temperature dyeing of wool: internal lipid structure modification with nonionic auxiliary *Coderch, Lopez, de la Maza, Parra, Cegarra* 131
of heat treated polyester: effect of on-line heat during high speed spinning on dye uptake *Wang, Hu* 428
of Leacril fibers: absorption of N-CP-Cl for improved dyeing; kinetics and thermodynamics *Espinosa-Jiménez, Giménez-Martin, Ontiveros-Ortega* 677
of nylon: closed-loop monitoring by dye and chemical metering *McGregor, Arora, Jasper* 609
of PET: alkaline treatment; ethylene glycol and glycerin as solvent *Yang, Tsai* 760
of piece-dyed worsted wools: relationship between hygral expansion and measured set *Dodd, Carr, Baird* 902
reactive dyeing of wool: controlling exhaustion by microencapsulation of dyes with liposomes *Gomes, Genovez, Hrdina* 537
wool dyeing with liposomes: multilamellar liposomes including cholesterol as metal complex dye carriers *de la Maza, Coderch, Manich, Parra* 325

Dyes
acid dyes on polyamides: dimensionless model for equilibrium sorption from finite dyebaths *Arora, McGregor* 389
direct dyeing of cotton: absorption kinetics of dye from finite baths *Hsiung, Chen* 77
dye diffusion in wool: restricted transcellular diffusion mechanism *Wortmann, Wortmann, Zahn* 720
dye diffusion: model for time-dependent adsorption and diffusion through dye sorption curves *Cleve, Bach, Denter, Duffner, Schollmeyer* 701
fiber reactive dye mixtures: correlating optical and kinetic deviations from ideality *Snyder, Berkstresser, Smith, Beck, McGregor, Jasper* 571
indigo dyes: environmental impact reduced by indirect electrolysis *Bechtold, Burtscher, Turcanu, Bobleter* 635

Dynamics
of drape: simulation of falling yarn with one end fixed *Ghith, Bruniaux, Koncar, Vasseur* 321

Environmental Impacts
of bleaching jute: low temperature peracetic acid system *Cai, David* 459
of enzymes on cotton: effect of pre-existing dyes and fabric type on cellulase treatment *Choe, Park, Cha, Jeon* 155

of glow discharge plasma: effect on shrinkage and physical properties of wool fabric *Zuchairah, Pailthorpe, David* 69
of indigo dyes: reduced by indirect electrolysis *Bechtold, Burtscher, Turcanu, Bobleter* 635
of plasma treatment: one-atmosphere glow dischage treatment to improve wettability *Tsai, Wadsworth, Roth* 359
recycled melt spun PET: processing characteristics *Fann, Huang, Lee* 891
Enzymes
for protein soil release: protease monitored by quartz crystal microbalance *Shimomura, Onozawa, Komiyama* 348
for retting flax cells: effect on structure and composition of cell walls *Akin, Morrison, Gamble, Rigsby, Henriksson, Eriksson* 279
to treat cottons: effect of pre-existing dyes and fabric type on cellulase treatment *Choe, Park, Cha, Jeon* 155

Fabric Defects
neural network study: training-free counter propagation network for pattern recognition *Rajasekaran* 401
Fabric Properties
tensile behavior: micromechanical model of a woven fabric *Realff, Boyce, Backer* 445
Fatigue
of mooring lines: wear and fatigue of nylon and polyester lines *Seo, Wu, Chen, Toomey, Backer* 467
Felting
needle punching of webs: effect of needle position and orientation on forces experienced by each needle *Seyam, Sarin* 772
Fiber Assemblies
random fiber mass: analyzing compressibility based on modified theory of fiber contact *Komori, Itoh* 204
Fiber Breakage
in cleaning cotton: modeling fiber breakage *Robert, Blanchard* 417
Fiber Processing
carding: modeling diffusive transport of bulk fiber mass *Wibberly, Roberts* 296
fibrous assemblies: compression and packing density *Neckář* 123
of cotton fibers to yarns: optimizing process with combined neural network/genetic algorithm approach *Boullart, Van Langenhove, Kiekens* 84
wool fiber opening: effect of level on moisture regain, tenacity, breakage *Suadipradja, Wang* 50
Fiber Properties
cotton fineness and maturity: theoretical and experimental profiles; Micromat, AFIS, NIR study *Gordon, Montalvo, Faught, Grimball, Watkins* 545
Flameproofing
of nylon 6: modifying with DBSC for heat and chemical stability *El-Garf, El-Kemry* 13
Flax
enzymatic retting of: influence of chelating agents and mechanical pretreatment *Henriksson, Akin, Rigsby, Patel, Eriksson* 829
retting with enzymes: effect on structure and composition of cell walls *Akin, Morrison, Gamble, Rigsby, Henriksson, Eriksson* 279
Flow Field Analysis
of nonwovens: measuring fiber orientation *Pourdeyhimi, Dent* 181
Fluoresence
dye diffusion in wool: restricted transcellular diffusion mechanism *Wortmann, Wortmann, Zahn* 720
Formaldehyde
ester crosslinking: polymeric carboxylic acid and citric acid on cotton *Yang, Wang, Kang* 334

Fracturing
impact cutting of wool: new method of shearing sheep *King* 580
Friction
sliding phenomena of fabrics: frictional behavior on metallic and polymeric solid surfaces *Virto, Naik* 793

Geometry
of a woven fabric: tensile behavior; micromechanical model *Realff, Boyce, Backer* 445
of braided composites: topology of 3D fabrics reinforced axially with pultruded rods *Kuo* 623
of friction spinning: analysis of yarn tension in the yarn-forming zone *Merati, Konda, Okamura, Marui* 643
Geotextiles
mechanical properties: predicting with finite element method *Liao, Adanur, Dréan* 753
Ginning
mechanical cleaning of cotton: effects of card wire condition on white specks *Bel-Berger, Von Hoven* 857
Glass Transition
of wool fabrics: influence on felting shrinkage *Pierlot* 616
of wool: improved determination using DSC *Kure, Pierlot, Russell, Shanks* 18

Hairiness
of cotton yarns: neural networks to predict for ring and rotor spun yarns; impact of fiber properties *Zhu, Ethridge* 694
of yarns: reducing with JetRing *Wang, Miao, How* 253
Hairiness
reduction during winding: air-jet attachment for cotton fibers *Wang, Miao* 481
Handle
improving fabric touch: measurement and macroscopical study of sanding and raising *Bueno, Viallier, Durand, Renner, Lamy* 779
of pigment prints: influence of pattern design and fabric type *Robinson, Chambers, Gatewood* 837
Heat Phenomena
evaluating heat transfer: comparison of vertical hot plate and thermal manikin *Satsumoto, Ishikawa, Takeuchi* 503
glass transition of wool: improved determination using DSC *Kure, Pierlot, Russell, Shanks* 18
heat treated polyester: effect of on-line heat during high speed spinning on dye uptake *Wang, Hu* 428
in yarn damage: thermal-impact damage of polyamide and polyester *Versluis, Krooshof, van Gulick* 211
IR absorption of fabrics: evaluation of IR emitters for heating and drying fabrics *Carr, Sarma, Johnson, Do, Williamson, Perkins* 725
thermal analysis of wool: DSC studies of melting behavior of crystallites in wool keratin *Cao, Joko, Cook* 117
Heat Resistance
of nylon 6: modifying with DBSC for heat and chemical stability *El-Garf, El-Kemry* 13
Heat Transfer
of fabric in a tenter frame: heat and mass transfer analysis *Park, Baik* 311
Hydrolysis
alkaline treatment of PET: ethylene glycol and glycerin as solvent *Yang, Tsai* 760

Image Analysis
of cotton trash and color: chromatic image analysis *Xu, Fang, Huang, Watson* 881
of lambswool and cashmere: large-scale fiber application *Robson* 747

of mechanically cleaned cotton: effects of card wire condition on white specks *Bel-Berger, Von Hoven* 857
of nonwoven fiber orientation: determined with Hough transform techniques *Xu, Yu* 563
of nonwovens: image analysis of fiber orientation using Fourier transform *Pourdeyhimi, Dent, Davis* 143
of nylon carpets: appearance loss in; structural factors *Presley* 174
Infrared
for heating and drying fabrics: absorption studies; evaluation of IR emitters *Carr, Sarma, Johnson, Do, Williamson, Perkins* 725

Jute
low temperature bleaching: peracetic acid system *Cai, David* 459

Kenaf
and cotton blends: durability and aesthetic properties *Ramaswamy, Easter* 803
Keratin
improved dyeing: reaction of a new thiol cationic surfactant with bunte salt *Diz, Jocić, Infante, Erra* 486
sulfitolysis treated wool fibers: FTIR analysis to study chemical changes *Erra, Gómez, Dolcet, Juliá, Lewis, Willoughby* 397
thermal analysis of: DSC studies of melting behavior of crystallites in wool keratin *Cao, Joko, Cook* 117
Kinetics
of batch dyeing: effect of temperature and salt on dye mixtures *Reddy, Jasper, McGregor, Lee* 109
of direct dyeing of cotton: absorption kinetics of dye from finite baths *Hsiung, Chen* 77
of fiber reactive dye mixtures: correlating optical and kinetic deviations from ideality *Snyder, Berkstresser, Smith, Beck, McGregor, Jasper* 571
of Leacril absorption: absorption of N-CP-Cl for improved dyeing; thermodynamics *Espinosa-Jiménez, Giménez-Martin, Ontiveros-Ortega* 677
of nylon dyeing: closed-loop monitoring by dye and chemical metering *McGregor, Arora, Jasper* 609
Knits
enzyme treated cotton: effect of pre-existing dyes and fabric type on cellulase treatment *Choe, Park, Cha, Jeon* 155
flat set of plain weft knits: degree and stability; effect of various relaxation treatments *Phukan, Subramaniam* 707
from wool self-twist yarns: air interlacing of staple fibers without filaments *Miao, Lui* 188
pigment print handle: influence of pattern design and fabric type *Robinson, Chambers, Gatewood* 837
single jersey wools: fabric-evoked prickle; role of fiber end diameter characteristics *Naylor, Phillips, Veitch, Dolling, Marland* 288
single jersey wools: fabric evoked prickle; role of fiber length, yarn count, fabric cover factor *Naylor, Phillips* 354
single jersey wools: wear trial studies of fabric prickle acceptability *Naylor, Phillips* 413
singles knitting yarns: torque-balanced cotton friction spun DREF III yarn *Lau, Tao* 815
singles spun yarns: torque-balanced cotton rotor spun yarns *Tao, Lo, Lau* 739
spirality in: effects of yarn and fabric construction on cotton single jersey knits *Tao, Dhingra, Chan, Abbas* 57
wool dyeing with liposomes: multilamellar liposomes including cholesterol as metal complex dye carriers *de la Maza, Coderch, Manich, Parra* 325
Lasers
to rate seam pucker: objective rating using neural networks *Park, Kang* 494
Lipids
cleavage by aminolysis: integral surface lipids of wool *Evans, Lanczki* 435
Lipids
in low temperature dyeing: internal lipid structure modification with nonionic auxiliary *Coderch, Lopez, de la Maza, Parra, Cegarra* 131
Liposomes
for disperse dyeing of nylon: influence of alkyl chain length of DADMAB *Kim, Kono, Takagishi* 664
for reactive dyeing of wool: controlling exhaustion by microencapsulation of dyes with liposomes *Gomes, Genovez, Hrdina* 537
Liposomes
for wool dyeing: multilamellar liposomes including cholesterol as metal complex dye carriers *de la Maza, Coderch, Manich, Parra* 325
Load-Extension
of woven fabrics: generalized model for predicting properties *Sun, Seyam, Gupta* 866
Looms
needle punching: effect of needle position and orientation on forces experienced by each needle *Seyam, Sarin* 772
set marks from: simulation of procedures to avoid *Vangheluwe, Kiekens* 34
weaving poly/cotton blends: weft insertion of yarns on air-jet looms; neural network model *Vangheluwe* 809
Luster
of kenaf and cotton blends: durability and aesthetic properties *Ramaswamy, Easter* 803

Mathematical Modeling
modeling drape: simulation of falling yarn with one end fixed *Ghith, Bruniaux, Koncar, Vasseur* 321
of acid dyes on polyamides: dimensionless model for equilibrium sorption from finite dyebaths *Arora, McGregor* 389
of air-jet spun yarns: computer simulation approach for engineering *Rajamanickam, Hansen, Jayaraman* 223
of air-jet spun yarns: modeling methods to predict strength *Rajamanickam, Hansen, Jayaraman* 39
of batch dyeing thermal process: multirate predictive control with nonlinear optimization application *Koncar, Koubaa, Legrand, Bruniaux, Vasseur* 788
of batch dyeing: effect of temperature and salt on dye mixtures *Reddy, Jasper, McGregor, Lee* 109
of bicomponent polyester fibers: high speed melt spinning; high and low molecular weight PET systems *Radhakrishnan, Kikutani, Okui* 684
of braided composites: topology of 3D fabrics reinforced axially with pultruded rods *Kuo* 623
of carding machine: optimal design of cylindrical shell *Stadnicki* 6
of carding: modeling diffusive transport of bulk fiber mass *Wibberly, Roberts* 296
of cotton cleanability: modeling fiber breakage *Robert, Blanchard* 417
of cotton fibers to yarns: optimizing process with combined neural network/genetic algorithm approach *Boullart, Van Langenhove, Kiekens* 84
of direct dyeing of cotton: absorption kinetics of dye from finite baths *Hsiung, Chen* 77
of dye diffusion: model for time-dependent adsorption and diffusion through dye sorption curves *Cleve, Bach, Denter, Duffner, Schollmeyer* 701
of fabric ballistic impacts: simple analytical model of composite body armor *Chocron-Benloulo, Rodríguez, Sánchez-Gálvez* 520

of fabric bending behavior: theoretical study of static fabric loops *Zhou, Ghosh* 712
of fabric defects: training-free counter propagation neural network for pattern recognition *Rajasekaran* 401
of fabric end-use: characterizing by physical properties *Chen, Collier* 247
of fabric evoked prickle: role of fiber length, yarn count, fabric cover factor; single jersey wools *Naylor, Phillips* 354
of fabric frictional behavior: sliding phenomena on metallic and polymeric solid surfaces *Virto, Naik* 793
of fabric in a tenter frame: heat and mass transfer analysis *Park, Baik* 311
of fiber reactive dye mixtures: correlating optical and kinetic deviations from ideality *Snyder, Berkstresser, Smith, Beck, McGregor, Jasper* 571
of fibrogram measurements: new interpretation *Chu, Riley* 897
of fibrous assemblies: compression and packing density *Neckář* 123
of fibrous sheets: in-plane shear strength of nonwovens *Pan, Zhang* 593
of friction spinning: analysis of yarn tension in the yarn-forming zone *Merati, Konda, Okamura, Marui* 643
of fusible interlinings: compatibility of outer and interlinings; selecting appropriate lining *Fan, Leeuwner, Hunter* 258
of geotextiles: predicting mechanical properties with finite element method *Liao, Adanur, Dréan* 753
of KES shear test for fabrics: improved results by treating fabric as an orthotropic sheet *Hu, Zhang* 654
of micromechanics: planar hybrid fibrous network *Pan, Chen, Seo, Backer* 907
of nonwoven fiber orientation: determined with Hough transform image analysis *Xu, Yu* 563
of plain weave structure: mechanical behavior using energy methods; fabric uniaxial extension *Sinomeri, Dréan* 370
of random fiber mass: analyzing compressibility based on modified theory of fiber contact *Komori, Itoh* 204
of rotor spinning machines: computational two-phase air/fiber flow in transfer channels *Kong, Platfoot* 269
of set marks in weaving: simulation of procedures to avoid *Vangheluwe, Kiekens* 34
of tensile behavior: micromechanical model of a woven fabric *Realff, Boyce, Backer* 445
of woven fabrics: generalized model for predicting load-extension properties *Sun, Seyam, Gupta* 866
of yarn mechanical properties: simulation based on properties and arrangement of fibers; finite element model *Van Langenhove* 263
of yarn mechanical properties: simulation based on properties and arrangement of fibers; practical measurements *Van Langenhove* 406
of yarn properties: based on properties and arrangement of fibers; results of simulations *Van Langenhove* 342
Mechanical Properties
of carbon fibers: numerical investigation of intrinsic mechanical properties *Kruscinska, Krucinski* 316
of fusible interlinings: compatibility of outer and lining fabrics; mechanical properties of fused composites *Fan, Leeuwner, Hunter* 137
of fusible interlinings: properties of fusible composites and outer and interlining fabrics *Fan, Leeuwner, Hunter* 194
of woven fabrics: generalized model for predicting load-extension properties *Sun, Seyam, Gupta* 866
of yarns: simulation based on properties and arrangement of fibers; practical measurements *Van Langenhove* 406
yarn properties simulation: based on properties and arrangement of fibers; finite element model *Van Langenhove* 263
yarn properties simulation: based on properties and arrangement of fibers; results of simulations *Van Langenhove* 342
Mechanics
of plain weave structure: energy methods; fabric uniaxial extension *Sinomeri, Dréan* 370
Micromechanics
of 2D fiber assembly: planar hybrid fibrous network *Pan, Chen, Seo, Backer* 907
Moisture Phenomena
in piece-dyed worsted wools: relationship between hygral expansion and measured set *Dodd, Carr, Baird* 902
moist fabrics on skin: in vivo cutaneous and perceived comfort response; stratum corneum hydration *Hatch, Prato, Zeronian, Maibach* 926
Moisture Regain
in wool fiber opening: effect of level on regain, tenacity, breakage *Suadipradja, Wang* 50
of cotton and polyester: evaluation of IR emitters for heating and drying fabrics *Carr, Sarma, Johnson, Do, Williamson, Perkins* 725
Moisture Transfer
of fabric in a tenter frame: heat and mass transfer analysis *Park, Baik* 311
of natural and synthetic fibers: effect of fiber and film moisture content on stratum corneum hydration *Cameron, Brown, Dallas, Brandt* 585

Needle Punching
needle force: effect of needle position and orientation on forces experienced by each needle *Seyam, Sarin* 772
Neps
neural network study: training-free counter propagation network for pattern recognition *Rajasekaran* 401
Neural Networks
for fiber-to-yarn production: optimizing process with combined network/genetic algorithm approach *Boullart, Van Langenhove, Kiekens* 84
for predicting yarn strength: modeling methods to predict strength of air-jet spun yarns *Rajamanickam, Hansen, Jayaraman* 39
to rate seam pucker: objective rating with a laser sensor *Park, Kang* 494
to study cotton yarn hairiness: predicting for ring and rotor spun yarns; impact of fiber properties *Zhu, Ethridge* 694
to study fabric defects: training-free counter propagation network for pattern recognition *Rajasekaran* 401
to study poly/cotton blend weaving: weft insertion of yarns on air-jet looms *Vangheluwe* 809
Nonwovens
fiber orientation in: determined with Hough transform image analysis *Xu, Yu* 563
fiber orientation in: flow field analysis of *Pourdeyhimi, Dent* 181
fiber orientation in: image analysis of fiber orientation using Fourier transform *Pourdeyhimi, Dent, Davis* 143
geotextiles: predicting mechanical properties with finite element method *Liao, Adanur, Dréan* 753
plasma treatment of: surface modification to improve fabric wettability *Tsai, Wadsworth, Roth* 359
shear strength of: in-plane shear strength of fibrous sheets *Pan, Zhang* 593
surgical gown materials: effect of dual function finish with antibiotic and blood repellent *Cho, Cho* 875
Nylon
acid dyes on polyamides: dimensionless model for equilibrium sorption from finite dyebaths *Arora, McGregor* 389
carpet appearance loss: image analysis of; structural factors *Presley* 174

disperse dyeing of nylon and PET: low temperature dyeing in the presence of DDDMAB *Kim, Kono, Takagishi* 767
disperse dyeing of: influence of alkyl chain length of DADMAB *Kim, Kono, Takagishi* 664
dope-coated with polymers: physical properties of polyurethane blend dope-coated fabrics for waterproofing *Enomoto, Suehiro, Muraoka, Inoue, Sumita* 601
dyeing of: closed-loop monitoring by dye and chemical metering *McGregor, Arora, Jasper* 609
fibrillar structure of: relation to diffusion, shrinkage, and relaxation *Murthy* 511
flameproofing of: modifying with DBSC for heat and chemical stability *El-Garf, El-Kemry* 13
mooring lines: wear and fatigue of nylon and polyester lines *Seo, Wu, Chen, Toomey, Backer* 467
static electricity in: temperature effect on dissipation into air; also polyester *Onogi, Sugiura, Matsuda* 45

Optics
of directional shades: effect of textile properties; optical study *Grasso, Hunn, Rewerts* 233
to identify cashmere fibers: identifying differences in wool and cashmere with optical microscopy *Fujishige, Koshiba* 619
to study dye mixtures: correlating optical and kinetic deviations from ideality in fiber reactive mixtures *Snyder, Berkstresser, Smith, Beck, McGregor, Jasper* 571
Orientation
in nonwovens: flow field analysis of fiber orientation *Pourdeyhimi, Dent* 181
in nonwovens: image analysis of fiber orientation using Fourier transform *Pourdeyhimi, Dent, Davis* 143
of nonwoven fibers: determined with Hough transform image analysis *Xu, Yu* 563

Plasma
glow discharge: effect on shrinkage and physical properties of wool fabric *Zuchairah, Pailthorpe, David* 69
glow discharge: surface modification to improve fabric wettability *Tsai, Wadsworth, Roth* 359
Polyamide
yarn damage: thermal-impact damage of polyamide and polyester *Versluis, Krooshof, van Gulick* 211
acid dyed: dimensionless model for equilibrium sorption from finite dyebaths *Arora, McGregor* 389
Polyester
air-jet spinning of blends: high speed yarn production; effects of fiber parameters *Bhortakke, Nishimura, Matsuo, Inoue, Morihashi* 101
alkaline treatment of: ethylene glycol and glycerin as solvent *Yang, Tsai* 760
and cotton blend yarns: weft insertion of yarns on air-jet looms; neural network model *Vangheluwe* 809
disperse dyeing of nylon and PET: low temperature dyeing in the presence of DDDMAB *Kim, Kono, Takagishi* 767
disperse dyeing of: dyeing in presence of double-tailed surfactant *Kim, Kono, Takagishi* 555
flameproofing of: modifying with DBSC for heat and chemical stability *El-Garf, El-Kemry* 13
flat set of plain weft knits: degree and stability; effect of various relaxation treatments *Phukan, Subramaniam* 707
frictional behavior of: sliding phenomena on metallic and polymeric solid surfaces *Virto, Naik* 793
heat treated: effect of on-line heat during high speed spinning on dye uptake *Wang, Hu* 428
in a tenter frame: heat and mass transfer analysis *Park, Baik* 311
IR absorption in: evaluation of IR emitters for heating and drying fabrics *Carr, Sarma, Johnson, Do, Williamson, Perkins* 725
moist fabric on skin: in vivo cutaneous and perceived comfort response; stratum corneum hydration *Hatch, Prato, Zeronian, Maibach* 926
mooring lines: wear and fatigue of nylon and polyester lines *Seo, Wu, Chen, Toomey, Backer* 467
needle punched webs: effect of needle position and orientation on forces experienced by each needle *Seyam, Sarin* 772
recycled melt spun fibers: processing characteristics *Fann, Huang, Lee* 891
sheath-core bicomponent fibers: high speed melt spinning; high and low molecular weight PET systems *Radhakrishnan, Kikutani, Okui* 684
surgical gown materials: effect of dual function finish with antibiotic and blood repellent *Cho, Cho* 875
tandem spinning of: air and ring combination spinning of cotton/poly composite yarns *Sawhney, Kimmel* 217
yarn damage: thermal-impact damage of polyamide and polyester *Versluis, Krooshof, van Gulick* 211
Polymers
as coatings for nylon: physical properties of polyurethane blend dope-coated fabrics for waterproofing *Enomoto, Suehiro, Muraoka, Inoue, Sumita* 601
Polypropylene
carpets: resilience properties determined by viscoelastic measurements *Vangheluwe, Kiekens* 671
Prickle
in single jersey knit wools: fabric-evoked prickle; role of fiber end diameter characteristics *Naylor, Phillips, Veitch, Dolling, Marland* 288
in single jersey wool knits: wear trial studies of fabric acceptability *Naylor, Phillips* 413
of single jersey wools: role of fiber length, yarn count, fabric cover factor *Naylor, Phillips* 354
Printing
pigment print handle: influence of pattern design and fabric type *Robinson, Chambers, Gatewood* 837

Rayon
surgical gown materials: effect of dual function finish with antibiotic and blood repellent *Cho, Cho* 875
Recycling
of melt spun PET fibers: processing characteristics *Fann, Huang, Lee* 891
Reflectance
of directional shades: effect of textile properties; optical study *Grasso, Hunn, Rewerts* 233
Relaxation
flat set of cotton knits: degree and stability; effect of various relaxation treatments on plain weft knits *Phukan, Subramaniam* 707
in nylon fibrils: relation to diffusion, shrinkage, and relaxation *Murthy* 511
of plain weave structure: mechanical behavior using energy methods; fabric uniaxial extension *Sinomeri, Dréan* 370
of wool/cotton blends: effects of humidity and blend ratio on tensile stress relaxation *Inoue, Niwa* 378
Resilience
of polypropylene carpets: resilience properties determined by viscoelastic measurements *Vangheluwe, Kiekens* 671
Retting
enzymatic retting of flax: influence of chelating agents and mechanical pretreatment *Henriksson, Akin, Rigsby, Patel, Eriksson* 829

of flax cells with enzymes: effect on structure and composition of cell walls *Akin, Morrison, Gamble, Rigsby, Henriksson, Eriksson* 279

Sanding
to improve fabric touch: measurement and macroscopical study of sanding and raising *Bueno, Viallier, Durand, Renner, Lamy* 779
Sewing
seam pucker in clothing: objective rating using neural networks and a laser sensor *Park, Kang* 494
seam quality determination: beta-particle transmission gauge *Titus, Clapp, Zhu, Gardner* 23
Shades
directional shading fabric: effect of textile properties; optical study *Grasso, Hunn, Rewerts* 233
Shear Strength
of nonwovens: in-plane shear strength of fibrous sheets *Pan, Zhang* 593
Shear Stress
KES test for fabrics: improved results by treating fabric as an orthotropic sheet *Hu, Zhang* 654
Shrinkage
of nylon: relation of fibrillar structure to diffusion, shrinkage, and relaxation *Murthy* 511
of wool fabrics: influence of glass transition on felting shrinkage *Pierlot* 616
Shrinkproofing
of wool fabric: effect of glow discharge treatment on shrinkage and physical properties *Zuchairah, Pailthorpe, David* 69
of wool fibers: FTIR analysis to study chemical changes after sulfitolysis treatment *Erra, Gómez, Dolcet, Juliá, Lewis, Willoughby* 397
Silk
wild silk fibers: microvoids in; x-ray study *Kawahara, Shioya* 385
Soiling
protein soil release: protease monitored by quartz crystal microbalance *Shimomura, Onozawa, Komiyama* 348
Spinning
air-jet spinning: high speed yarn production; effects of fiber parameters *Bhortakke, Nishimura, Matsuo, Inoue, Morihashi* 101
air-jet spun yarns: computer simulation approach for engineering *Rajamanickam, Hansen, Jayaraman* 223
cotton twistless yarns: wrap spun yarns versus ring spun yarns *Ruppenicker, Sawhney, Calamari, Harper* 198
friction spinning: analysis of yarn tension in the yarn-forming zone *Merati, Konda, Okamura, Marui* 643
hairiness of cotton yarns: neural networks to predict for ring and rotor spun yarns; impact of fiber properties *Zhu, Ethridge* 694
JetRing spinning: reducing yarn hairiness *Wang, Miao, How* 253
melt spinning of polyester: high speed spinning of sheath-core bicomponent fibers *Radhakrishnan, Kikutani, Okui* 684
of air-jet spun yarns: modeling methods to predict strength *Rajamanickam, Hansen, Jayaraman* 39
of cotton fibers to yarns: optimizing process with combined neural network/genetic algorithm approach *Boullart, Van Langenhove, Kiekens* 84
of polyester filaments: effect of on-line heat during high speed spinning on dye uptake *Wang, Hu* 428
of recycled melt spun PET: processing characteristics *Fann, Huang, Lee* 891
of singles knitting yarns: torque-balanced cotton friction spun DREF III yarn *Lau, Tao* 815
of singles knitting yarns: torque-balanced cotton rotor spun yarns *Tao, Lo, Lau* 739
of wool self-twist yarns: air interlacing of staple fibers without filaments *Miao, Lui* 188
ring-frame drafting: effect of drafting zone variables on twist in wools *Fang, Lee, Cassidy* 163
roller drafting: fiber motion monitoring using tracer fibers *Weber, Wulfhorst* 10
rotor spinning machines: computational two-phase air/fiber flow in transfer channels *Kong, Platfoot* 269
tandem spinning: air and ring combination spinning of composite yarns *Sawhney, Kimmel* 217
Spirality
in cotton single jersey knits: effects of yarn and fabric construction *Tao, Dhingra, Chan, Abbas* 57
of singles knitting yarns: torque-balanced cotton friction spun DREF III yarn *Lau, Tao* 815
of singles knitting yarns: torque-balanced cotton rotor spun yarns *Tao, Lo, Lau* 739
Static Electricity
in various fabrics: temperature effect on dissipation into air *Onogi, Sugiura, Matsuda* 45
Statistical Techniques
cotton fiber fineness study: theoretical and experimental profiles; Micromat, AFIS, NIR study *Gordon, Montalvo, Faught, Grimball, Watkins* 545
for seam quality determination: beta-particle transmission gauge *Titus, Clapp, Zhu, Gardner* 23
to predict fabric end-use: characterizing by physical properties *Chen, Collier* 247
to study micromechanics: planar hybrid fibrous network *Pan, Chen, Seo, Backer* 907
Strain
in yarns: simulating mechanical properties based on properties and arrangement of fibers *Van Langenhove* 342
in yarns: simulation based on properties and arrangement of fibers; finite element model *Van Langenhove* 263
in yarns: simulation based on properties and arrangement of fibers; practical measurements *Van Langenhove* 406
Stress-Strain
of geotextiles: predicting mechanical properties with finite element method *Liao, Adanur, Dréan* 753
Surface Properties
of wool fibers: based on contact angle measurements *Horr* 1
Surfactants
disperse dyeing of nylon and PET: low temperature dyeing in the presence of DDDMAB *Kim, Kono, Takagishi* 767
for disperse dyeing of polyester: dyeing in presence of double-tailed surfactant *Kim, Kono, Takagishi* 555
for improved wool dyeing: reaction of a new thiol cationic surfactant with bunte salt *Diz, Jocić, Infante, Erra* 486
for Leacril fiber treatment: absorption of N-CP-Cl for improved dyeing; kinetics and thermodynamics *Espinosa-Jiménez, Giménez-Martin, Ontiveros-Ortega* ... 677
for protein soil release: protease monitored by quartz crystal microbalance *Shimomura, Onozawa, Komiyama* 348

Tenacity
in wool fiber opening: effect of level on moisture regain, tenacity, breakage *Suadipradja, Wang* 50
Tensile Properties
KES shear test for fabrics: improved results by treating fabric as an orthotropic sheet *Hu, Zhang* 654
of developing Acala cotton: strength and crystalline structure *Hsieh, Hu, Nguyen* 529
of JetRing yarns: reducing hairiness *Wang, Miao, How* 253
of mooring lines: wear and fatigue of nylon and polyester lines *Seo, Wu, Chen, Toomey, Backer* 467
of wool/cotton plied yarns: effects of humidity and blend ratio on tensile stress relaxation *Inoue, Niwa* 378

of yarns: micromechanical model of a woven fabric *Realff, Boyce, Backer* 445
Thermal Analysis
of batch dyeing process: multirate predictive control with nonlinear optimization application *Koncar, Koubaa, Legrand, Bruniaux, Vasseur* 788
of yarn damage: thermal-impact damage of polyamide and polyester *Versluis, Krooshof, van Gulick* 211
Thermal Properties
evaluating heat transfer: comparison of vertical hot plate and thermal manikin *Satsumoto, Ishikawa, Takeuchi* 503
of DP finished cotton: effect of catalysts on thermal characteristics of cotton citric acid finishes *Trask-Morrell, Andrews* 846
Tracer Techniques
in roller drafting: fiber motion monitoring using tracer fibers *Weber, Wulfhorst* 10
Twist
cotton twistless yarns: wrap spun yarns versus ring spun yarns *Ruppenicker, Sawhney, Calamari, Harper* 198
in ring-frame drafting: effect of drafting zone variables on twist in wools *Fang, Lee, Cassidy* 163
in single jersey knits: effects of yarn and fabric construction on spirality *Tao, Dhingra, Chan, Abbas* 57
self-twist yarns: air interlacing of wool staple fibers without filaments *Miao, Lui* 188

Waterproofing
of nylon fabrics: physical properties of polyurethane blend dope-coated fabrics *Enomoto, Suehiro, Muraoka, Inoue, Sumita* 601
Wear
of mooring lines: wear and fatigue of nylon and polyester lines *Seo, Wu, Chen, Toomey, Backer* 467
Weaves
of directional shades: effect of textile properties; optical study *Grasso, Hunn, Rewerts* 233
of polyester/cotton blends: weft insertion of yarns on air-jet looms; neural network model *Vangheluwe* 809
set marks in: simulation of procedures to avoid *Vangheluwe, Kiekens* 34
Wettability
plasma treatment for: one-atmosphere glow dischage treatment *Tsai, Wadsworth, Roth* 359
Winding
reducing hairiness in: air-jet attachment for cotton fibers *Wang, Miao* 481
Wool Fabrics
dyeing with liposomes: multilamellar liposomes including cholesterol as metal complex dye carriers *de la Maza, Coderch, Manich, Parra* 325
frictional behavior of: sliding phenomena on metallic and polymeric solid surfaces *Virto, Naik* 793
glass transition of: improved determination using DSC *Kure, Pierlot, Russell, Shanks* 18
glass transition of: influence on felting shrinkage *Pierlot* 616
moisture transfer in: effect of fiber and film moisture content on stratum corneum hydration; also synthetics *Cameron, Brown, Dallas, Brandt* 585
piece-dyed worsted wools: relationship between hygral expansion and measured set *Dodd, Carr, Baird* 902
plasma treatment of: effect of glow discharge treatment on shrinkage and physical properties *Zuchairah, Pailthorpe, David* 69
prickle in single jersey knits: role of fiber length, yarn count, fabric cover factor *Naylor, Phillips* 354
prickle in single jersey knits: wear trial studies of fabric acceptability *Naylor, Phillips* 413
properties of woven wool: generalized model for predicting load-extension properties *Sun, Seyam, Gupta* 866
reactive dyeing of: controlling exhaustion by microencapsulation of dyes with liposomes *Gomes, Genovez, Hrdina* 537
single jersey knits: fabric-evoked prickle; role of fiber end diameter characteristics *Naylor, Phillips, Veitch, Dolling, Marland* 288
static electricity in: temperature effect on dissipation into air *Onogi, Sugiura, Matsuda* 45
Wool Fibers
and cashmere fibers: identifying differences with optical microscopy *Fujishige, Koshiba* 619
dye difusion in: restricted transcellular diffusion mechanism *Wortmann, Wortmann, Zahn* 720
fiber opening in: effect of level on moisture regain, tenacity, breakage *Suadipradja, Wang* 50
fiber surface: description based on contact angle measurements *Horr* 1
impact cutting of: new method of shearing sheep *King* 580
improved dyeing: reaction of a new thiol cationic surfactant with bunte salt *Diz, Jocić, Infante, Erra* 486
integral surface lipids: cleavage by aminolysis *Evans, Lanczki* 435
lambswool and cashmere: image analysis of fibers; large-scale fiber application *Robson* 747
low temperature dyeing of: internal lipid structure modification with nonionic auxiliary *Coderch, Lopez, de la Maza, Parra, Cegarra* 131
ring-frame drafting of: effect of drafting zone variables on twist in wools *Fang, Lee, Cassidy* 163
self-twist yarns: air interlacing of staple fibers without filaments *Miao, Lui* 188
sulfitolysis treatment: FTIR analysis to study chemical changes *Erra, Gómez, Dolcet, Juliá, Lewis, Willoughby* 397
tensile properties of blends: effects of humidity and blend ratio on tensile stress relaxation *Inoue, Niwa* 378
thermal analysis of: DSC studies of melting behavior of crystallites in wool keratin *Cao, Joko, Cook* 117

X-Rays
to study cotton fibers: strength and crystalline structure of developing Acala fibers *Hsieh, Hu, Nguyen* 529
to study nylon fibrillar structure: relation to diffusion, shrinkage, and relaxation *Murthy* 511

Yarn Properties
tensile behavior: micromechanical model of a woven fabric *Realff, Boyce, Backer* 445
Yarns
friction spinning of: analysis of yarn tension in the yarn-forming zone *Merati, Konda, Okamura, Marui* 643
mechanical properties of: based on properties and arrangement of fibers; results of simulations *Van Langenhove* 342
mechanical properties of: simulation based on properties and arrangement of fibers; finite element model *Van Langenhove* 263
mechanical properties: simulation based on properties and arrangement of fibers; practical measurements *Van Langenhove* 406
